Instrument Plugin Manual

Tetrad - Blended Keys

Have you downloaded all your files?

Please ensure you have **DOWNLOADED ALL FILES** associated with your Plugin **BEFORE BEGINNING INSTALL PROCESS.** *This includes the Plugin Installer, Sample Archive, Manual & anything else you can download.*

Install Instructions

1. Run Your Installer

Double-Click your installer file to initiate your installation. Once running, follow the prompted instructions to install your files.

Files included for your OS:

MAC: *VST3 & AU*

WIN: *VST3*

Files will be installed to the locations below:

MAC:

AU - Macintosh HD:\Library\Audio\Plug-Ins\Components

VST3 - Macintosh HD:\Library\Audio\Plug-Ins\VST3

WINDOWS:

VST3 - C:\Program Files\Common Files\VST3

Note: You can relocate any of these files after installation

2. Download & Unzip Your Samples Archive

To keep your plugin size small and minimize CPU usage, your **Samples Archive** is included separately. Download & Unzip this file to a location of your choosing. Please remember where you put it as you will need to direct the plugin to this folder.

3. Open your DAW & load the Instrument

Open your DAW and scan for new Plugins. Once your new Plugin is visible, create a new MIDI track and insert the Plugin.

4. Load your Samples

Once you open the Plugin, it will immediately ask you to provide the necessary samples for the instrument.

Your screen will read:

Choose Sample Folder

- Click the "Choose Sample Folder" button (it will ask *Have you installed the samples yet,* Click "OK" to continue)
- Navigate to the **Samples Archive** folder you downloaded previously
- Select the **Samples Archive** folder (contains ".ch1" or ".wav" sample files)
- You will be prompted to open a new instance of the Plugin

You are now ready to create some tunes!

NOTE: If you relocate the extracted samples folder, you will have to redirect the Plugin to the folder again. Simply click the "Change Sample Folder Location" button in the settings popup panel.

Troubleshooting

Sample Installation Error

Go to the folder that contains the *configuration files* for the sample library and delete all the files it contains. Then, reopen the sample library and everything should be just as it was before you extracted the samples.The configuration files were created when you installed the software. The location of these files vary between operating systems.

MAC: */Library/Application Support/New Nation/*

WIN: */Users/username/AppData/Roaming/New Nation/*

NOTE: You may need to show your "Hidden Files" to view these folder locations.

Sample Folder Location

If at some point after installation you move the samples to a different location you will need to redirect the sample libraries search path.

You may be prompted to do this when you run the library after moving the samples or you can do it manually by going into the SETTINGS section of the plugin and clicking the *Change Sample Folder Location* button & navigate to your new Sample Folder.
